

To Prevent Traffic Accidents at Intersections!

英語

＝ About 30% of all injury accidents occur at intersections ＝

Ensure safety with the "3 stops" method!

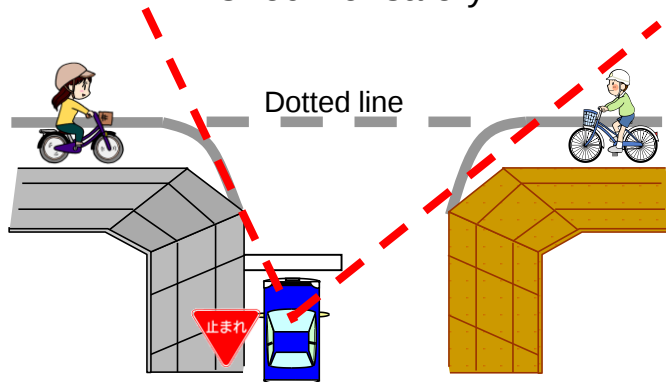

One
~one stop

Two
2 stops

Three
3 stops for safety confirmation

1 stop

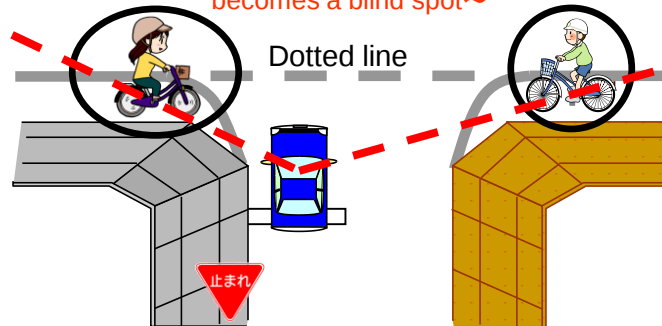

Come to a complete stop at the stop line.
Check for safety!

2 stop

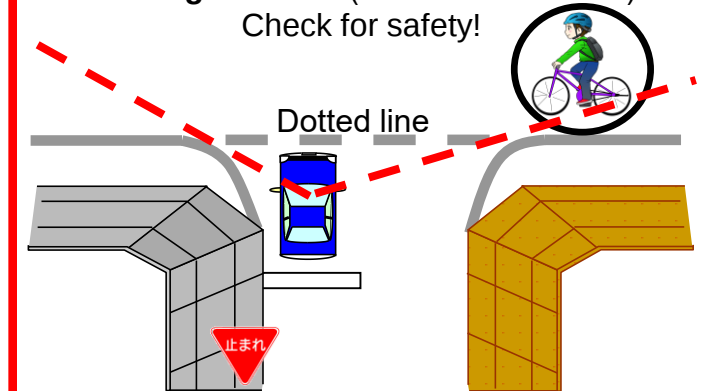

Stop again **before entering the Intersection.**
Check for safety!

~Thoroughly check the left side for safety, as it often becomes a blind spot~

3 stop

Stop once more. Check again **just before entering the road** (on the "dotted line").
Check for safety!

❌ At intersections with poor visibility, predict potential danger even if there is no stop sign. Slow down and check both sides before proceeding.

Predicting
Danger

「The "maybe"...mindset」

Maybe there
is a bicycle
coming?

Predicting danger at
intersections

Maybe I can't
see the bicycle?

Predicting danger on
blind spots

(It might be hard to see
because it's dark.
(bicycles, etc))

Predicting danger at night
